7-Rib Split
Running Bond

Aggregate exposure in all deep scored and fluted units will vary across the unit face, but is not discernable when viewing the entire field.

Cells and web configurations as shown are representational only, and actual configurations may differ.

Features

Narrow, angular slots cut through a split elevation for a detailed, dramatic feel. Split ribs reveal the aggregate matrix for a randomly surfaced, hewn appearance.

Add relief and depth of texture to fields and bands; create visual anchoring to lower elevations or striking accent to top of walls.

Availability

Special order only. Configurations such as open ends and open end bond beams may be available. May be limited in plant location. Units can be made in any of our integral color options. Corner units not available.

Standards

Concrete masonry units manufactured by Angelus Block Co., Inc. meet ASTM C90 Standard Specification for Loadbearing Concrete Masonry Units.

Fire Rating

Solid grouted walls 8-in wide and greater are rated at 4 hours, per CBC Table 721.1(2). For partially grouted walls, depending on the specified weight classification, 8-inch wide units are 1 hour to 2 hours, and 12-inch wide units are 2 hours to 3 hours.

Sustainable Features

- This product is included in *Environmental Product Declaration for Angelus Block Concrete Masonry Units*, a Type III EPD, and in one of six *Health Product Declarations*, as applicable for its weight classification.
- Contributes to green rating systems calculations, including Regional Materials, EPDs, and Material Ingredient Reporting.
- Angelus Block CMU help facilitate and support many more strategies and credits, including Optimize Energy Performance, Construction Waste Management, and several within Indoor Environmental Quality. Angelus Block CMU contain no VOCs.
